Hello Mark,

You can use an upside down Y cable at the headphone output.
One side goes to the mike input, the other to the headphone.

http://www.cablestogo.com/product/40426

Beware though that a headphone also can work as a microphone and pick up
room noise, which will compromise decoding!
(Mine does!)

73,
Roelof Bakker

6195. RE: Configuring Perseus SDR and Yand software under W7

Hi Marc,

Apart from the Y-cable Roelof suggested, yet another possibility is to use the "Stereo Mix" aka "What You Hear" output. But, many laptops have this driver not installed or disabled - pressed by the music industry-because it makes copying CDs too easy!

Before you start looking for a driver, the disadvantages of this method are:
1/ It is indeed a mixed output: if you play a CD (or whatever other sound source is active) , Yand will "hear" the CD mixed with the Perseus audio: disastrous for decoding!
2/ Perseus' output cannot be disabled. iow, if you don't want to monitor it anymore through the speakers, you must connect a headphone (or a dummy connector)

Regards - Dirk

Hi Dirk, I have uninstalled the VAC now and I'm listening via a patch cable: headphone out <-> line in.
I think it's working well now. But I want to make it in such a way that I still can hear the signals from Perseus also (Monitoring) so I'll to fix loudspeaker with a connector or something .. But's that is not a big problem.
thnks for tips.

Can you work with Yand and Perseus under W7 without installing VAC.
I heard from others that it's possible

Hi Marc,

Sure you can: connect the headphone output to the mike/line input with a patch cable and select this input in Yand.

Regards - Dirk

Marc,

Start yand and see if an input "stereo mix" or "what u hear" is available.
If it isn't, maybe this link can help:
<http://www.nowsmart.com/stereo-mix-windows-7.html>

Hello all,

Last night a enormous thunderstorm featured over Italy and apparently this
direction was not in null of the loop!
Fortunately, it has diminished quite a bit over the day, though.

Daily log:

6207. Navtex Log from Antwerp, BEL 20131007

Yahoo group: navtexdx (2013)
Date: 2013-10-07 19:16:17 UTC
From: Dirk Claessens
Topic: 6207 Message: 6207

Hi all,

A long fragment of San Juan could be logged, and Cyprish Turkish Radio again borrowed the E ID-letter from Samsun.

Regards - Dirk

The message from Curacao was more or less the same as I have had for

a few nights recently:-

20131008 0513 518 $04H JPC Curacao ,ATN/XMJ329 Prescott, ON,CAN 5731

2013-10-08 05:13:01> ZCZC WQ1515Z SEPT2013.

2013-10-08 05:13:15> ALL VSSLS IN AND AROUND POS 13-48.7N 071-47.3W ARE NOTIFIED THAT A GREEN AND

2013-10-08 05:13:27> WHITE 15M DERELICT TRAWLER ADRIFT THIS CAN BE DANGEROUS TO NAVIGATION

2013-10-08 05:13:33> DUTCH CARIBBEAN COAST GUARD (5999-4637700)

2013-10-08 05:13:35> NNNN

Unfortunately the distance given is almost certainly for Prescot,

Curacao is quite a few Km past San Juan !

Incidently, Sao Miguel is still calling itself Horta Radio.

Bob

From: <dl4ybp@...>
Topic: 6213 Message: 6213

logged here after along time again. If I take into account that we are at the climax of the sunspot maximum, although a small maximum, I would not say that propagation is mediocre. I am quite astonisde about the signals here down on 518 kHz.

Hello all,

Propagation seems to be recovering a bit.
However, as the Kyoto Dst dived to -65 overnight the improvement might be
short lived!

Hi David,

Roelof, of course :0)

It seems you have not installed the latest station list update, available here:

<http://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder>

You need YAND_STATIONS.TXT.

The Monsanto transmitter was relocated to Penalva, and the Horta transmitter to Sao Miguel.

Cheers - Dirk

Vincent,

But why decodes the program it as Monsanto ?

I have the latest YAND_STATIONS.TXT

David

David,

OK, but have you also IMPORTED the file in Yand?
Database > Import Station Table from file>, with the check box "only import station data" UNchecked?

Regards - Dirk

Hello Don

Quick update. Tried various ways of combining the output from 2 antennas, results extremely poor.
Reception became very directional and signal attenuation was unacceptable.

Following various suggestions I bought an MFJ 1026 off eBay and modified it by removing the high
pass filter components that then made the 1026 usable on 490/518 MHz. I have not yet done the other mods some suggest is worthwhile.

Using the 1026 gives me 360 degree coverage with about 3/4 dB signal loss. The ability to vary the gain on each antenna is useful.

Regards Stephen

Hello Dirk,

Propagation from Canada has collapsed almost completely.
I can hardly unearth a single Canadian NDB from my overnight recording.

So it was a surprise to find VON, just like you did.
Amazingly decodes on the loop and the mini-whip were almost complete
identical!

73,
Roelof

Good morning,
Pleased to hear OXI Nuuk and UJB Astrakhan , firsts for me. YaND seems to have decoded CTH Azores as NMF Boston - sadly.

Hello all,

Slightly better propagation.
There were many decodes from Astrakhan, which probably is due to Bodo
still missing by lack of northern propagation.
I found a MAYDAY message from VON at 05:35 UTC.

From: Dirk Claessens
Topic: 6228 Message: 6230

Hello Dryden,

I found why. The CTH message contains the following line:

2013-10-11 00:54:10> ``REBECCA II`` AND ``TOMAINE"

"Maine" is a geographical keyword for 04F Boston, and Yand will stop on the first keyword match.
To avoid this in the future, click database> scroll the station list down to 04F Boston, click on it, then in the middle window double-click on Maine, confirm the deletion, finally press "save keyword list".

An alternative way is to first delete Maine as above, and then add the new keyword " MAINE " (without the quotes and note the spaces before and after!) Don't forget to save the list.

Regards - Dirk

P.S. I'm since long contemplating a new IDing algorithm that -instead of stopping on the first match - would count the number of matching keywords for all stations using the given ID-letter, and let the highest number win. This would surely have found CTH Azores.
But this will have to wait, I'm quite busy now working on a DSC decoder.

6232. RE: Configuring Perseus SDR and Yand software under W7

Yahoo group: navtexdx (2013)
Date: 2013-10-11 20:11:27 UTC
From: <marc652013@...>
Topic: 6149 Message: 6232

hi Everyone,

After some experiments the last few days I finally come to the conclusion that configurating without a VAC is not working very well..I decided to download VAC v 4.13 again and installing it.. The monitoring of the signal is now done via a USB Aureon dual Terratric soundcard device which works fine here at my laptop..

The experiment with a Y - cable and headphone jack audio backwards into microphoneis is not working fine in my situation because of to less audio levels into Yand.

Yesterday evening without any problems stations as Grindvik, Izmir came in very good so this configuration
is for me at this moment the best.

Marc,

Start yand and see if an input "stereo mix" or "what u hear" is available.
If it isn't, maybe this link can help:

Hi Dirk, how can I see if a driver is installed on my Laptop ?

---In navtexdx@yahoogroups.com mailto:navtexdx@yahoogroups.com, <navtexdx@yahoogroups.com mailto:navtexdx@yahoogroups.com> wrote:

Hi Marc,

Apart from the Y-cable Roelof suggested, yet another possibility is to use the "Stereo Mix" aka "What You Hear" output. But, many laptops have this driver not installed or disabled - pressed by the music industry-because it makes copying CDs too easy!

Before you start looking for a driver, the disadvantages of this method are:
1/ It is indeed a mixed output: if you play a CD (or whatever other sound source is active) , Yand will "hear" the CD mixed with the Perseus audio: disastrous for decoding!
2/ Perseus' output cannot be disabled. iow, if you don't want to monitor it anymore through the speakers, you must connect a headphone (or a dummy connector)

Regards - Dirk

---In navtexdx@yahoogroups.com mailto:navtexdx@yahoogroups.com, <marc652013@...> wrote:

Hi Dirk, I have uninstalled the VAC now and I'm listening via a patch cable: headphone out <-> line in.
I think it's working well now. But I want to make it in such a way that I still can hear the signals from Perseus also (Monitoring) so I'll to fix loudspeaker with a connector or something .. But's that is not a big problem.
thnks for tips.

Can you work with Yand and Perseus under W7 without installing VAC.

I heard from others that it's possible

Hi Marc,

Sure you can: connect the headphone output to the mike/line input with a patch cable and select this input in Yand.

Regards - Dirk

6235. Navtex Log from Lodi - ITALY

Yahoo group: navtexdx (2013)
Date: 2013-10-12 08:36:24 UTC
From: Maurizio Marini
Topic: 6235 Message: 6235

Hello all,

finally at my latitude something is moving...
EQM Bushehr,IRN is very rare here and I have logged it at 20:00 and at
23:59.

My logs:

6238. Logs from Walsoorden

Yahoo group: navtexdx (2013)
Date: 2013-10-13 08:36:24 UTC
From: David Onley
Topic: 6238 Message: 6238

It□s a pity the static wrecked a potentially good night. Had the corkscrew
QRM on the beverage antenna here at Walsoorden.

Have not been concentrating on Navtex, mainly Mediumwave. However Leo
Fissers logged Curacao the previous evening. I must wind my PC clock back
with the Perseus recordings and see what I had for that particular evening.

Leo had deze morgen Curaçao op 518 kHz.

Hi Roelof

Horrible! Steady rain, high wind. The fields are full of water and we will be up to our eyeballs in mud. We can see a break in the weather for 3pm. It might be a fight for the shower afterwards.

Can you drop over with an umbrella?

73
Dave

Roelof

After 80mm of rain, that was one of the most difficult radio trip pack-ups I have ever done. We had about 1000m of wire to reel in, including hundreds of meters of coax.

Walsoorden surely must be renamed to Mudsoorden. I got stuck big time up to my knees and couldn't break free. As I stood there freezing and soaked I thought of what those poor souls in WWI must have gone through in the vlanders mud. And I had just an hour in it..

Well that's enough for me until our next trip in January.

73
Dave

Hello Dave,

Glad to hear you survived your battle with the heavy Zealandish sea clay!
(Which makes gardening here a body building exercise!)

At 80 mm rain it could have been worse.
50 km north they got 120 mm!
That is 120 liter per square meter!

73,
Roelof

6246. Questions - YaND Decoding

Yahoo group: navtexdx (2013)
Date: 2013-10-14 03:10:34 UTC
From: George
Topic: 6246 Message: 6246
Attachments: 2 described; binary payloads are missing from this source WARC

Questions: Does that attached "Perseus YaND 3" show two overlapping Navtex transmissions? Compare with "Perseus YaND 4" taken a few seconds later which displays the Perseus screen of the corresponding incoming rf signal. Are there two different Navtex transmissions, slight offset in frequency, superimposed?

Comment: I have been struggling this weekend to obtain a clear decode of ANY Navtex transmissions. YaND picked out no stations from six hours of recordings last night nor from three hours of recordings made the night before. Propagation has been excellent this past weekend ... unusually strong signals in all time slots.

The screen captures shown in the attachments were made during the time slot (00:20) assigned to Sept-Iles. I wonder if Miami (time slot 00:00) was over running and scrambling the decoding of Sept-Iles. The difficulty that I find with this explanation is that in a nine hour period surely at least one transmission would have been correctly decoded.

Comments, criticisms, suggestions, etc. will be gratefully received. Thank you.

73, George M (N2XM)

Additional: The screen captures included were from transmissions received with a PA0RDT Mini Whip driving a Perseus SDR, RTTY mode, tuned to 518 KHz, bandwidth 3000 Hz, 30 dB (i.e. full) attenuation, 2-3% INP Level, 14-20 SNR. Sensibly the same results were obtained with the Perseus replaced by an SDR-IQ, or an ICOM R-75.

I am confident that the sound card settings, signal polarity, etc. were correctly set. Also, YaND was not being overdriven. I had to use full attenuation on all receivers and, in addition, tested an even further reduced signal level with a variable stepped attenuator in the line between the Mini Whip and the receiver in use. Signals were very strong this weekend.

6248. RE: [navtexdx] Questions - YaND Decoding [2 Attachments]

Yahoo group: navtexdx (2013)
Date: 2013-10-14 07:52:46 UTC
From: David Onley
Topic: 6246 Message: 6248

Hi George

One thing that stuck out with me is that you use 3000 hz bandwidth. I use 500 hz with the Perseus. 3000 is huge.

73

Dave

From: navtexdx@yahoogroups.com [mailto:navtexdx@yahoogroups.com] On Behalf Of George
Sent: maandag 14 oktober 2013 5:11
To: navtexdx@yahoogroups.com
Subject: [navtexdx] Questions - YaND Decoding [2 Attachments]

[Attachment(s) from George included below]

Questions: Does that attached "Perseus YaND 3" show two overlapping Navtex transmissions? Compare with "Perseus YaND 4" taken a few seconds later which displays the Perseus screen of the corresponding incoming rf signal. Are there two different Navtex transmissions, slight offset in frequency, superimposed?

Comment: I have been struggling this weekend to obtain a clear decode of ANY Navtex transmissions. YaND picked out no stations from six hours of recordings last night nor from three hours of recordings made the night before. Propagation has been excellent this past weekend ... unusually strong signals in all time slots.

The screen captures shown in the attachments were made during the time slot (00:20) assigned to Sept-Iles. I wonder if Miami (time slot 00:00) was over running and scrambling the decoding of Sept-Iles. The difficulty that I find with this explanation is that in a nine hour period surely at least one transmission would have been correctly decoded.

Comments, criticisms, suggestions, etc. will be gratefully received. Thank you.

73, George M (N2XM)

Additional: The screen captures included were from transmissions received with a PA0RDT Mini Whip driving a Perseus SDR, RTTY mode, tuned to 518 KHz, bandwidth 3000 Hz, 30 dB (i.e. full) attenuation, 2-3% INP Level, 14-20 SNR. Sensibly the same results were obtained with the Perseus replaced by an SDR-IQ, or an ICOM R-75.

I am confident that the sound card settings, signal polarity, etc. were correctly set. Also, YaND was not being overdriven. I had to use full

attenuation on all receivers and, in addition, tested an even further reduced signal level with a variable stepped attenuator in the line between the Mini Whip and the receiver in use. Signals were very strong this weekend.

Sorry George.. not enough coffee.. I see its 517 hz filter..

Need to put my glasses on my brain.. still need some sleep after the weekend of dx.

Dave

Okay George.. more coffee.. okay now

I always find if I have problems with decodes that it's probably that the soundcard is not set up correctly. I wait for a strong signal in Yand and do Auto calculate in the Signal calibration. Mine sits at about 0.99434 but each PC would be different. I noticed yours was sitting smack bang on 1.0000 After a few times you see that it's basically around the same level and I then write it down somewhere for future reference. I also like to wind my sound mixer levels back to about 85 %. It's probably a good starting point.

I'm not sure this is your problem but try the auto cal and see if things improve.

6252. RE: Questions - YaND Decoding

Yahoo group: navtexdx (2013)
Date: 2013-10-14 14:09:41 UTC
From: <dirk.claessens@...>
Topic: 6246 Message: 6252

Hi George,

The screenshot of Yand shows a perfect signal of sufficient strength, and is not a mixture of 2 interfering stations. (When selecting "FIR" , the output of Yand's 2 Finit Impulse Response filters is shown)

As can be seen on the screenshot, the calibration factor in use is 1.000, so I'm pretty sure your soundcard needs to be calibrated. Yand can cope with errors up to ~1..1.5 % without calibration, but anything larger will cause repetitive "out of sync" problems (also visible on the screenshot: some text{}some text{}some text)

Note that soundcards (especially on laptops) can have errors >3..4% which is disastrous. (I own one, which was the reason to add the calibration function!). The easiest way to calibrate is perhaps to make a Perseus recording of a strong signal and use that for calibration.

Regards - Dirk

Hi Roelof,

?????? I've never seen such behaviour, this is weird!
Did it stop by itself, or have you restarted Yand to stop it?

Regards - Dirk

From: George
Topic: 6246 Message: 6258

Thanks David and Dirk ... your help is much appreciated. It was indeed a timing problem ... resynchronized the computer and all is well. Apologize for calling for help when instead I should have delved more deeply into the nature of the problem.

Perhaps an explanation of my waywardness is in order. This past weekend I was testing a 6-foot diameter octagonal open-wire loop tuned to 518 KHz. My plan is to use this antenna with my SDR-IQ and a separate computer (i.e. separate from that used for NDB DXing) as a dedicated Navtex system. Problems arose and I wondered if the Navtex transmission used for the testing was part of the problem.

So I switched back to my "known-Navtex-reliable" Persus/Mini Whip combination to listen. Switched back? Almost but not quite ... my "reliable" system uses a different computer. When I switched I stayed with the computer dedicated to the 'loop antenna" system. When, upon your suggestion, this computer was resynchronized, all of the decoding problems disappeared.

Again, thanks for your help and I regret that the carelessness in my troubleshooting technique caused taking your time.

73, George M (N2XM)

Subject: [navtexdx] RE: Questions - YaND Decoding

Hi George,

The screenshot of Yand shows a perfect signal of sufficient strength, and is not a mixture of 2 interfering stations. (When selecting "FIR" , the output of Yand's 2 Finit Impulse Response filters is shown)

As can be seen on the screenshot, the calibration factor in use is 1.000, so I'm pretty sure your soundcard needs to be calibrated. Yand can cope with errors up to ~1..1.5 % without calibration, but anything larger will cause repetitive "out of sync" problems (also visible on the screenshot: some text{}some text{}some text)

Note that soundcards (especially on laptops) can have errors >3..4% which is disastrous. (I own one, which was the reason to add the calibration function!). The easiest way to calibrate is perhaps to make a Perseus recording of a strong signal and use that for calibration.

Regards - Dirk

I saw this for Friday evening at Walsoorden. It's certainly harder trying to make out local languages. But looking below I see Isimli and am wondering if this is Ismailia Egypt. The time slot certainly fits and I'm 80% sure its it.

I'll have a log soon. It's interesting to go back and see what was there with a beverage antenna. Earlier in the evening we had a 400m wire pointing at Asia and then about 2100 UTC (11pm local) we were switching over to the Nth American beverage (400m) which was aimed more at the Caribbean and Southern tip of USA this time.

6262. Re: [navtexdx] 490 Ismailia

Yahoo group: navtexdx (2013)
Date: 2013-10-15 08:50:22 UTC
From: Dirk Claessens
Topic: 6259 Message: 6262

Hi David,

Ismailia does not use 490KHz, and the language is Turkish.
Most likely this is Samsun, scheduled for 00:00UTC

KARADENIZ = Black Sea
DENIZCILERE=Seafarers

Regards - Dirk

>I saw this for Friday evening at Walsoorden. It's certainly harder trying to make out local languages. But looking below I see Isimli and am wondering if this is Ismailia Egypt. The time slot certainly fits and I'm 80% sure its it.
>
>
>I'll have a log soon. It's interesting to go back and see what was there with a beverage antenna. Earlier in the evening we had a 400m wire pointing at Asia and then about 2100 UTC (11pm local) we were switching over to the Nth American beverage (400m) which was aimed more at the Caribbean and Southern tip of USA this time.

6263. Navtex Log from Antwerp, BEL 20131015

Yahoo group: navtexdx (2013)
Date: 2013-10-15 09:08:15 UTC
From: <dirk.claessens@...>
Topic: 6263 Message: 6263

Hi all,

Good propagation from all directions except from up North.
I logged a long fragment of San Juan. Odessa popped up in the log as well. Long time no see.

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR, Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m
Antenna2 : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3

6265. Friday 518 log for Walsoorden

Yahoo group: navtexdx (2013)
Date: 2013-10-15 10:27:00 UTC
From: David Onley
Topic: 6265 Message: 6265

Logs for Friday from Walsoorden. Asian antenna (400m) until around 2100
when we then switched to the USA / Caribbean antenna (400m).

Perseus SDR and YAND 6.3

6266. Re: [navtexdx] 490 Ismailia

Yahoo group: navtexdx (2013)
Date: 2013-10-15 10:32:41 UTC
From: David Onley
Topic: 6259 Message: 6266

Many thanks Dirk.

I can see what happened now. The Schedule clicked back over to 518 from 490 at some point of looking at the logs. I was looking at Navarea 9 at 2350 on 518.

I need to visit my local bread shop on more regular basis.

73
Dave

6268. 490 logs Friday

Yahoo group: navtexdx (2013)
Date: 2013-10-15 12:03:50 UTC
From: David Onley
Topic: 6268 Message: 6268

Some Friday logs from Walsoorden on 490. I put all stations received just out of interest. VCO was terrific at this time.

Its very much the unloved band by many.

From: Roelof Bakker
Topic: 6255 Message: 6269

Hello Dirk,

I found this in the log as it is!

The last few nights I have noticed a weak idling station early in the
evening.
YaND's Sync indicator was green, but no text was received.

Maybe this has something to do with it.

73,
Roelof

Hi Dirk,

No, I was not " complaining " about Horta Radio ! I just thoght it was

interesting.

Again I am not complaining that where 2 stations have the same

ID it is difficult fot the program to identify which one is being received.

In fact, YaND does a remarkably good in virtually all situations, I just

wondered if there was anything that could be done to correct the very

few small errors that occur !

In the case of Curaco, I have now put " DUTCH " and " CARRIBEAN "

in the Key Words list and that may well solve that one and give me the

distance !

No, Dirk, I have absolutely no complaints about the peogram ! We are

lucky to have such a marvelous program for " free "

Kind Regards

Bob

Hi,

The only other time I have seen this is on RTTY from Offenbach Met transmissions where it seems to be some form of test signal. Offenbach also use RY and an idling signal.

From: Alan Gale
Topic: 6274 Message: 6274
Attachments: 1 described; binary payloads are missing from this source WARC

Hi All,

The results of the latest IHO WWNWS Committee Meeting which took place in Monaco earlier this month are now online, and copies of all the individual Navarea Reports can be downloaded from there in .pdf format:

http://www.iho.int/mtg_docs/com_wg/CPRNW/WWNWS5/WWNWS5.htm

The most interesting item for me was in NAVTEX Panel's Report, which stated that Italy planned to have a new station at Piombino on 490 kHz, though no date as to when this will happen yet.

Lots of other updates too regarding any changes and details of inactive or planned stations.

Next year's meeting will be held in New Zealand. A copy of the Panel Report is attached.

73 for now, Alan.

From: <adriaanaarts@...>
Topic: 6277 Message: 6277

Is it only me who is receiving a CW station on the navtex frequency 518 KHz?
It has appeared all of a sudden.
It transmits the letters ARD, as far as I can hear.
It is weak but Yand sees it.

Does anybody else receive this station?

The carrier is exactly in the middle of the shift.

Best regards,
Adriaan.

Hello Adriaan,

This is indeed the ARD Arad, Romania airport beacon sitting almost exactly on 518khz.
JBR Jaspbereny is another one, although more rarely heard.
In autumn and winter, both can be quite strong at times.
When ARD is strong, this often indicates good propagation from the south east.

If you have a Perseus it can easily be notched out completely.

Regards - Dirk

Hello, Dirk and Vincent.

Thank you for your quick reply.
I haven't heard it before, in fact my situation is very bad because I have a lot of interference from PLC somewhere in the street...
Now it seemed to be very quiet and with the special propagation this beacon is coming out from the noise :-)

But I don't have a Perseus.
I have 2 NRD535D's. They have a notch but it is not very effective.
Also I use a Timewave DSP which can notch out very easy, but in practise it is not so useful.

Thank you anyway.

Best regards,
Adriaan.

From: Roelof Bakker
Topic: 6277 Message: 6284

Hello Adriaan,

I can copy ARD-317 all year round here.
It does no harm to NAVTEX decoding as far as I can see.
So, I have no notch switched in.

73,
Roelof Bakker

6285. NAVTEX from Zealand, HOL

Hello all,

Propagation from the north has vanished, it seems.
There was quite a bit of static last night.
Towards sunrise things calmed down a bit and some post sunrise propagation
from Canada was noted.
Local sunrise is at 06:10 UTC and at 06:37 UTC an excellent decode from
Sydney, CAN was found.
That is on the mini-whip, but nothing on the loop.

A little earlier VON was received on both antennas.

Hi Alan,

Thanks for the info.
Is it your or my turn to attend the meeting in New Zealand next year? :0)

Cheers - Dirk

Hi Dirk,

I think we both should go, and take a couple of big blonde secretaries
as well (just to take notes of course), I'm sure the group members will
be only too happy to pay for our trip! :-D

73 for now, Alan.

6290. Re: [navtexdx].Caracao location solved

Topic: 6259 Message: 6290

Hi Dirk,

I found that I could remove the other location in the database but that

did not give me the distance to the remaining Caracao !

I remembered that I had used DX Atlas before but when I tried it again

my " time " had expired so I had to re install it.

Caracao is not one of the " cities " on the list but Caracas is, so I had

to use my atlas to locate Caracao relative to Caracas. The map on the

program is not very clear and it was a little bit of guesswork to establish

Caracao. The best I could get for distance to home was 7410 Km.

Strangely, this is almost exactly the same as the distance to New Orleans

from which I have recently had quite a few messages which YaND had

located for me !

So my puzzle is now solved. I am not able to get YaND to give me its

calculation so would you please tell me what the YaND distance will

be if I ever get another good clear message.

All the Best

Bob

Hello Bob,

Could Caracao be Curacao (Netherlands Antilles) received in error?
The distance from the center of Isle of Wight is 7393Km according to Google Earth, so you're very close. And New Orleans is indeed at the same distance from your QTH within a few km.

Regards - Dirk

Hi all,

Weak T/A, and as Roelof said: absolutely nothing from up north.

Regards - Dirk

6295. Navtex Log From Antwerp, BEL 20131017

Yahoo group: navtexdx (2013)
Date: 2013-10-17 10:06:40 UTC
From: Dirk Claessens
Topic: 6295 Message: 6295

Hi all,

Stable T/A propagation. Despite interruptions from local stations, San Juan and Miami kept coming back.
Two faultless decodes from Sydney just before sunrise.

Regards - Dirk

```

Hi All,

The Trans Atlanics have come over slightly better in the last

few days, even New Orleans is back. This was last nights,

20131016 2308 518 $04R NMR San Juan,PTR 6754

20131017 0054 518 $04F NMF Boston,USA 5238

20131017 0213 518 $04N NMN Portsmouth,USA 5968

20131017 0239 518 $04Q VCO Sydney,CAN 4281

20131017 0240 518 $04Q VCO Sydney,CAN 4281

20131017 0312 518 $04R NMR San Juan,PTR 6754

20131017 0358 518 $04Q VCO Sydney,CAN 4281

20131017 0452 518 $04F NMF Boston,USA 5238

20131017 0511 518 $04G NMG New Orleans,USA 7424

20131017 0555 518 $04C VCK Sept-Iles,CAN 4476

20131017 0600 518 $04Q VCO Sydney,CAN 4281

20131017 0602 518 $04Q VCO Sydney,CAN 4281

20131017 0637 518 $04Q VCO Sydney,CAN 4281

This is the first time I have had San Juan before midnight

for a long time !

There were a few others that were possibles but all these

were recognised by YaND.

Cheers

Bob

Hello Dirk,

No Miami here; I guess I have to turn the beam a little more to the south west!

Hi Roelof,

Mine was set to 290/110 the last couple of weeks.
Could also be a case of selective "propagation bubbles" (TM) where a few kilometres can make the difference.

Regards - Dirk

Hello Dirk,

I have changed the direction a bit to NW / SE.

It is interesting to note that Talinn seems now nulled out.

At 20:00 UTC this was received from Novorossiysk on the mini-whip

With the previous setting I had many perfect copies of UDN on the loop.

Comparing the loop and the mini-whip is interesting.
It clearly shows that the mini-whip has more trouble with co-channel interference.
However, being omnidirectional pays off as a larger number of stations is received.

It should be interesting to set up a second loop.
However, I have run out of defunct ALA1530's at the moment!

73,
Roelof

6300. Lübbecke 17/18 Oct: Quite a bu sy night with some interesting

results like Madeira and many decodes of Astrakhan and, most of all, Varna. I left out many other stations, which I received here and was quite puzzled about the early appearance of Sao Miguel.

6303. HORTARADIO/CTH navtex 518 QSL!!

Yahoo group: navtexdx (2013)
Date: 2013-10-18 15:39:01 UTC
From: Mauricio Molano Sánchez
Topic: 6303 Message: 6303

The Azores navtex station when operated from Horta was rarely received at my QTH.I sent them a reception report on March 2010 via snail mail without success. When I learned that CTH was about to close I searched and re-searched the web until I found an email of the station. This was on March 2012. I sent my report to that email but without response until yesterday They tell me that only regained access to this email account in the morning and that the station was closed on Jan 7th 2013 but they are still doing listening to the distress channels until new commands will be received.

6304. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-10-18 17:59:05 UTC
From: Roelof Bakker
Topic: 6295 Message: 6304

Hello all,

Though completely logical, it is kind of weird to have excellent decodes
from Archangelsk on the mini-whip and Limnos on the loop at the same time!

Loop:

Hello all,

Though completely logical, it is kind of weird to have excellent decodes
from Archangelsk on the mini-whip and Limnos on the loop at the same time!

Hi Roelof,

See below what I caught last night from Arkhangelsk on the whip and the loop.
Arkhangelsk is ~ 15 degrees off the null of the loop, so this should still cause _some_
attenuation, but if the signal goes above the detection threshold of the decoder (and
without interference from other stations which seems to be the case here), it will work.

Regards - Dirk

Oops, forgot this one San Juan.
Loop + Perseus is definitely better, but that's most likely caused by the superior performance of the Perseus. (there's only one way to know: Perseus and Lowe on the same antenna via the splitter)

Regards - Dirk

6307. Receiving Astrakahn

Yahoo group: navtexdx (2013)
Date: 2013-10-18 21:34:43 UTC
From: <adriaanaarts@...>
Topic: 6307 Message: 6307

The conditions on medium wave must be very good at this time.
I never received Astrakahn Russia, but I did today !!!
Some little missing but 90% of the messages were readable.

I'm happy to add a new navtex station to my list

Adriaan.

6308. XLJ895 Thunder Bay ?

From: <stephen_qrp@...>
Topic: 6308 Message: 6308

Hello

This collection of characters almost hyroglifics really came in overnight, and was interpreted by YaND as Thunder Bay. Whilst the time slot is correct, I have nothing within the transmission to help confirm the originating station.

Does anyone else have anything that ties in with the garbled message shown below that might help ?

Regards to all Stephen

Hi Stephen,

Yand identiguessed Thunder Bay because of the ID letter P + the keyword NOTSHIP, which is a typically Canadian keyword. But... the first part of the message is clearly coming from 1P Den Helder, HOL:

2013-10-19 02:41:46>
2013-10-19 02:41:47> NNNN

I guess that the original word NOTICE in the Split message was garbled to NOT~~~~ , and was reconstructed to [NOTSHIP] by YaND - as indicated by the [] brackets.

Regards - Dirk

Hello

This collection of characters almost hyroglifics really came in overnight, and was interpreted by YaND as Thunder Bay. Whilst the time slot is correct, I have nothing within the transmission to help confirm the originating station.

Does anyone else have anything that ties in with the garbled message shown below that might help ?

Regards to all Stephen

Thank you Dirk

I would have expected Den Helder to have been decoded cleanly, so I guess several signals / transmissions / noise were competing with each other and nothing sensible was decoded.

Kind regards
Stephen

Hi Stephen,

Yand identiguessed Thunder Bay because of the ID letter P + the keyword NOTSHIP, which is a typically Canadian keyword. But... the first part of the message is clearly coming from 1P Den Helder, HOL:

Topic: 6295 Message: 6312

Hello all,

Northern propagation seems to be a tad better now as Bjuroklubb appeared
in the log.
This has not happened for quiet some time.

Also three decodes from Bermuda were logged.

Hello Adriaan,

Yes, conditions from the east are excellent!
Nice to see you logged a new station.

73,
Roelof

6315. Re: [navtexdx] My first log from Italy

Yahoo group: navtexdx (2013)
Date: 2013-10-19 17:48:12 UTC
From: Roelof Bakker
Topic: 6314 Message: 6315

Hello Roberto,

Welcome to the NAVTEX list and thank you for your log.

Regarding your question, this is the faultless decode:

20131019 0356 518 $01P PBK Den Helder,HOL 180
2013-10-19 03:56:44> ZCZC PB95
2013-10-19 03:56:48> NETHERLANDS COASTGUARD
2013-10-19 03:56:53> GALE WARNING NR. 95 190355 UTC OCT
2013-10-19 03:56:58> ISSUED AT. 19 0347 UTC OCT
2013-10-19 03:56:59> VIKING
2013-10-19 03:57:02> EAST TO SOUTHEAST 7
2013-10-19 03:57:04> OTHER DISTRICTS:
2013-10-19 03:57:07> NO WARNING
2013-10-19 03:57:07>
2013-10-19 03:57:08> NNNN

(This station is 80 km from my home as the crow flies and running 1 kW!)

This is a gale warning and these are often transmitted out of the official
time slot.
The only requirement is that no other station from the same NAVTEX area is
transmitting at the same time.

73,
Roelof Bakker

6316. Den Helder

This is how I receive the new transmitter of 'Den Helder'.

Hi Vincent,

Seems to be stuck on one leg. Den Helder is by my knowledge the only station that, prior to sending each message, switches the transmitter off and then back on for a few seconds on the upper SB frequency, and then starts the sync signal. I'm guessing this is done to tune the antenna circuits. Perhaps this mechanism failed?
I've checked at 19:25 UTC and the channel was clear here.

Regards - Dirk

Hello Roberto,

First off: welcome to the group!

Regarding your question: each Navtex station is assigned a 10 minute time slot every 4 hours, but messages deemed urgent can be sent at anytime.

Regards - Dirk

6321. Log Lübbecke: Nuuk Greenland?

Yahoo group: navtexdx (2013)
Date: 2013-10-20 10:19:22 UTC
From: <dl4ybp@...>
Topic: 6321 Message: 6321

Quite an interesting night here on 518 kHz. Sydney, Canada does not appear quite often here. Log fragments of San Juan, Puerto Rico appeared. And then Nuuk possibly. Also very seldom here. Is there anyone who can check this log, please?

Hallo Roelof,

So Grindavik is the station, which I received and this makes sense, because I receive it regularly. What is unusual is Grindavik's weak reception quality which made me think it was Nuuk. Aditinonally I could receive Sydney, Canada and this also inspired me. The following message from Grindavik was as usual and fits your log. Here I had Ismailia (weak), Nuuk supposed (weak) and then Grindavik (strong). See my log.

Thanks Roelof and have a nice Sunday.

Hans, Dl4YBP

6326. Navtex Log from Antwerp, BEL 20131020

Yahoo group: navtexdx (2013)
Date: 2013-10-20 19:38:53 UTC
From: Dirk Claessens
Topic: 6326 Message: 6326

Hi all,

Finally, I found 4H Curacao in the logs.
A bit damaged in transit, but clearly identifiable.

This was received on the loop, with the Perseus and the Lowe HF225 in parallel via a splitter.
The Perseus is clearly a better receiver than the 20 year old Lowe, and explains the observed differences when comparing loop+Perseus vs. whip+Lowe.

Regards - Dirk

Loop + Perseus

6328. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-10-20 20:01:56 UTC
From: Roelof Bakker
Topic: 6314 Message: 6328

Hello all,

Propagation from the Caribbean must have been excellent.
I received proper decodes from Puorto Rico, Bermuda and Curacao.

Good morning,
Only one possible new one here for me - SUK Quseir,EGY - only fragments, with clues in text -'Red Sea' and 'Suez'. Could not fit it into any scheduled slot so I would appreciate it please if anyone could confirm this one? Many thanks

Hello Dryden,

This is interesting.
I also found Qusair recognised by YaND in this timeslot albeit at a
different time.
Bahrein was found as well. See below.

My guess is that all messages are from Ismailia, EGY.
There was quite a bit of static, which might have corrupted the headers.
Maybe one of our Italian friends have received these messages properly.

Hello,
I think your guess is right Roelof- Ismailia, and thanks Vincent for the back-up. I wonder if it is a YaND alogorithm adding up 'Red Sea' and a corrupted callsign to arrive at Qusair. According to database Qusair covers Red Sea area, not Ismailia, so maybe that's where the logic came from? A more local decode would be good.

Hi Dryden,

Both Quseir and Ismailia have "SUEZ" in their keyword list.
As others suggested, what most likely happened is that the X (Ismailia) was received in error as V at your side, causing Yand to point to Quseir.

ZCZC V

Hello Roelof,

Nothing received this morning at that time, but yesterday I logged St. John's with a very similar message.

Regards - Dirk

Hi Dryden,

Both Quseir and Ismailia have "SUEZ" in their keyword list.
As others suggested, what most likely happened is that the X (Ismailia) was received in error as V at your side, causing Yand to point to Quseir.

Subject: [navtexdx] RE: NAVTEX Log 20/21 Oct Corby UK

Hello,
I think your guess is right Roelof- Ismailia, and thanks Vincent for the back-up. I wonder if it is a YaND alogorithm adding up 'Red Sea' and a corrupted callsign to arrive at Qusair. According to database Qusair covers Red Sea area, not Ismailia, so maybe that's where the logic came from? A more local decode would be good.

6344. Navtex Log 21-22/10/2013 from Tuscany and something about Yand

Yahoo group: navtexdx (2013)
Date: 2013-10-22 09:53:30 UTC
From: Roberto Rizzardi
Topic: 6344 Message: 6344

Hi all,
nothing special in receptions this night with YAND.
But I noticed that several partial receptions that contained the words
already included in the "keywords list" were not detected by the
software and classified as UNID.
Is it happened to you too?
How to improve the identification of stations received?

I compared YAND with other decoders at the same time on the same PC and
I noticed that SeaTTY has better performance in decoding weak signals or
disturbed, although this is not a free software and has fewer features.

73, Roby

6346. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-10-22 10:58:37 UTC
From: Roelof Bakker
Topic: 6314 Message: 6346

Hello all,

VCO, Sydney, CAN was received 20 minutes after local sunrise.
I received Svalbard, however still no sign of Bodo.
I wonder if it is off at the moment!

Daily log:

6347. Navtex log from Lodi - North Italy

Yahoo group: navtexdx (2013)
Date: 2013-10-22 13:02:31 UTC
From: Maurizio Marini
Topic: 6347 Message: 6347

Hello,

after a long period of poor reception, finally it seems recovering in
north Italy too !
Even if a lot of statics, good reception from middle west and two
garbled messages from San Juan.

Hello Dirk,

Been away from Navtex Dx for sometime, good to be back in the group and some great logs! Good to be back on YaND!

Using Winradio with antenna tuner and long wire which is not a great setup for DX so looking to get ALA Loop...

Beta YaDD working well too, thanks for taking on DSC, has quite a following as Navtex dx does have too)
Following development of YaDD with great interest)

Hi Steve,

Welcome back, conditions on 518 have been outstanding the last weeks.
I must say DSC is quite more complicated than Navtex; DSC is a number dance with many exceptions/variations/illogicalities. You probably know the saying: "A camel is a race horse designed by a committee", well, DSC is the camel, and the committee is the ITU-R-M493 :0)

If all goes well, the next beta will be out end of the week. It should correctly decode format 120 messages (with all variations) and "all ships" messages.

Regards - Dirk

6353. Re: [navtexdx] Navtex Log 21-22/10/2013 from Tuscany and something about Yand

Yahoo group: navtexdx (2013)
Date: 2013-10-22 15:27:14 UTC
From: Dirk Claessens
Topic: 6344 Message: 6353

Hi Roby,

YaND has 2 keywords lists for each station: UIDs (Universally Unique IDs) for example "ISTANBUL TURK RADIO", "BODORADIO". And GIDs (Geographical IDs) such as "PORTSMOUTH", "SEA OF MARMARA", "REYKJAVIK", etc..

UIDs always work (if present), but for the GID's to work, YanD must also have received a valid header sequence (ZCZC <letter>). For instance, with the keyword "PORTSMOUTH" present (but no ID-letter), it is impossible to distinguish Niton from Cullercoats, as both stations have this keyword in their list.

Regarding decoding performance, the last time I compared YaND5.6 to SeaTTY2.30, the results were indecisive, both decoders handled weak signals equally well.

Have a look here for the methodology and results of the test:
<http://tinyurl.com/pfnocr6> (PDF format)

Have you calibrated your soundcard? Especially on laptops this can be very important to get optimal performance.

Regards - Dirk

6354. RE: Dirk YaND - YaDD

Yahoo group: navtexdx (2013)
Date: 2013-10-22 15:40:51 UTC
From: <stevesden1@...>
Topic: 6351 Message: 6354

Hello Dirk,

Thanks for the reply, yes good to be back and 518 is good right now even with just long wire.. NaND working great!..
Hope to get ALA Loop to get into DXNavtex and also DSC and DGPS..
Lot of noise where I live and ALA should make it a lot quieter..) the long wire is a bit of a struggle...

Good news about NaDD! Yes take your point about Camel)))
Thanks Dirk!

Regards..
Steve

---In navtexdx@yahoogroups.com, <dirk.claessens@...> wrote:

Hi Steve,

Welcome back, conditions on 518 have been outstanding the last weeks.
I must say DSC is quite more complicated than Navtex; DSC is a number dance with many exceptions/variations/illogicalities. You probably know the saying: "A camel is a race horse designed by a committee", well, DSC is the camel, and the committee is the ITU-R-M493 :0)

If all goes well, the next beta will be out end of the week. It should correctly decode format 120 messages (with all variations) and "all ships" messages.

Regards - Dirk

Hello Dirk,

Been away from Navtex Dx for sometime, good to be back in the group and some great logs! Good to be back on YaND!

Using Winradio with antenna tuner and long wire which is not a great setup for DX so looking to get ALA Loop...

Beta YaDD working well too, thanks for taking on DSC, has quite a following as Navtex dx does have too)
Following development of YaDD with great interest)

6355. Re: [navtexdx] Navtex Log 21-22/10/2013 from Tuscany and something about Yand

Yahoo group: navtexdx (2013)
Date: 2013-10-22 16:41:50 UTC
From: Roberto Rizzardi
Topic: 6344 Message: 6355

Hi Dirk,

in first time I want to thank you for your Yand software that introduce
me in the Navtex world.

I had selected "GIDs" and I had added more keywords in the database and
I was thinking the software was able to detect all the words in the
messages to help the station identification without the header: I now
have clear.

I have an old desktop pc machine with WinXP Home SP3, Intel Pentium 4
CPU 3.06GHz, 2GB RAM, VIA/S3G UniChrome Pro IGP, Relatek AC'97 audio.
I know it's not a machine with high performances and maybe Yand requires
the use of higher CPU than SeaTTY.

I read your test and it is interesting.
I did a test with playing a wav file recoded on a low signal and I used
five different decoder, then I posted the test on my blog
http://diarioradio.blogspot.it/2013/09/navtex-confronto-fra-alcuni-decoder.html
This test it's not scientific like your, but this is what I have in my
conditions.

I have not done the calibration because I saw that the program worked
well; I'll try to get it to see if it improves.

I take this opportunity to ask you two more things.

Why in the Station List of the Database tab are still present the
stations of Trieste, Roma, Cagliari and Augusta even if the updated YAND
Station file does not contain them anymore?
Is it need for previously logs?

I think we should delete these inactive stations also from kml file

Thanks for the help and good listening!

73, Roby

6356. Re: [navtexdx] Navtex Log 21-22/10/2013 from Tuscany and something about Yand

Yahoo group: navtexdx (2013)
Date: 2013-10-22 18:23:53 UTC
From: Dirk Claessens
Topic: 6344 Message: 6356

Hi again Roberto,

-I was puzzled by this line in your report:

Yand- In USB decodifica al 99%- In CW decodifica al 80%.

What type of CW filter was used, what was it's bandwidth? The CW mode was maybe the reason Yand and other decoders ran into problems. (although I cannot explain why SeaTTY didn't have problems as well)

- After putting the file yand_stations.txt into the ../yand directory, you should not forget to also import it into the database. (database > click IMPORT button, with "only import station data" UNchecked. After that, the .txt file is not needed anymore.

Regards - Dirk

Hello Roberto,

Regarding IF filters; CW filters are designed for maximum selectivity,
which will cause wide phase excursions.
These phase excursions make life difficult for data modes.
There are special professional filters available without phase shift.
However these are expensive.

My AR7030plus has two extra filters, a YF455FMB / CFL-231 300 Hz CW filter
and a YF455DE / CFL-233 1 kHz filter.
Both are crap on NAVTEX and the cheap standard Murata SSB filter gives far
better results!

Heavy filtering is not necessary as the software takes care of that.

73,
Roelof

Hi Dirk,

on my Icom IC-R71E I have two filter only with 2.8 kHz and 2.3 kHz
bandwidth both for SSB and CW.
In the test I just wanted to see the difference between the selection of
decoding on the receiver to USB (Normal) and CW (Inverted) instead of
LSB with the same bandwidth, just out of curiosity.

I had already performed the procedure for importing the file YAND
Station, but leaving checked the option to "ONLY import station data"
not to miss the keywords I had added.
In fact, redoing the procedure now without the check, the keywords I
have added are lost and in the Station List , however, the Italian
inactive stations are still present in.

I something wrong?

From: <stevesden1@...>
Topic: 6362 Message: 6362

Hi all....

Read a message here a few days ago about SeaTTY being better at decoding than YaND.....so compared a couple of programs over 24 hours. .all 4 being run at same time using Winradio and Winradio Virtual Soundcard.....

Winradio Navtex Plugin Multipsk DSC Decoder and YaND.

Frequency 518 kHz CW.

Winradio came bottom followed by DSC Decoder, missing out chunks of data..

Next Multipsk pretty good and not much in it between SeaTTY and YaND in data accuracy.

I would say that in my experience that YaND takes top spot not only with accuracy but is also is consistent.
As a dedicated stand alone Navtex decoder and all the configurations it offers and freeware.....well...its a winner ;)

Hi all,

A remarkable night. I logged multiple perfect decodes from Ismailia and Sept-Iles.
Also fragments from Odessa were seen, and San Juan is becoming a daily guest.

Regards - Dirk

Hi Roelof,

I wonder what they're up to... 02:10 is indeed a "N" slot.
I checked with REU; most logs there as 03R were correctly in the R-slot: 18:50/22:50 etc., except my single log at 00:50 and a few from Mike Thayne at other times.

Maybe interference with other navarea III stations was reported?

Regards - Dirk

Hi Steve,

I think that every software has its own process of data processing that
can have a greater or lesser demand for resources for the CPU, then, as
I wrote in the message, rather old pc on a lighter program may encounter
fewer difficulties in decoding, that is not found on higher performance
machines.
It 'obvious that the considerations should not stop here, but
considering all the functions of YAND than the other, it stands out clearly.

Hi Roby,

Thanks for the reply and good comments too ;)

Agree with your comments about data processing that can have a greater or lesser demand for resources for the CPU and older computers too....

I guess each has their favourite program and at the end of the day it is about what we are comfortable with)

Thanks Roby!

Read a message here a few days ago about SeaTTY being better at decoding than YaND.....so compared a couple of programs over 24 hours. .all 4 being run at same time using Winradio and Winradio Virtual Soundcard.....

Winradio Navtex Plugin Multipsk DSC Decoder and YaND.

Frequency 518 kHz CW.

Winradio came bottom followed by DSC Decoder, missing out chunks of data..

Next Multipsk pretty good and not much in it between SeaTTY and YaND in data accuracy.

I would say that in my experience that YaND takes top spot not only with accuracy but is also is consistent.
As a dedicated stand alone Navtex decoder and all the configurations it offers and

freeware.....well...its a winner ;)

6371. Re: [navtexdx] Navtex Log 21-22/10/2013 from Tuscany and something about Yand

Yahoo group: navtexdx (2013)
Date: 2013-10-24 09:24:15 UTC
From: Roberto Rizzardi
Topic: 6344 Message: 6371
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

this is my Station List On Keyword list editor on Yand after imported
Yand Station txt file from site and you can see that there are still the
italian inactive station:

The problem is that, in the case of a reception is not complete, it
happens sometimes that is indicated in the log the wrong station, as
this night.
Here's an example:

20131023 2330 518 $03V IQA Augusta,SCY 682
20131023 2332 518 $03V ICI Sellia Marina,ITA 618

The only way to prevent these errors was to erase every word of inactive
stations and add the correct ones to others.
Is there another way to resolve this problem?
Is your Station List in the same way?

Hi Roberto,

Now I understand, you were hit by the "Italian problem" :0)
All Italian stations were relocated in recent years, but the original ID-letters were re-used for the new station names. The database updater cannot cope with that situation. There are 2 solutions:

1/ edit the databasefile yand_db.abs with DBManager: delete all the old Italian station entries. Be very careful with dbmanager; it is a bulldozer, don't expect "Are you sure" questions.

Then start Yand and re-apply the update with yand_stations.txt.

2/ Uninstall Yand, then manually delete the ../yand directory *completely*
then goto:

<http://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder>

and download YandSetup6_3D.exe. Install this version, then apply the station update.

With solution 2, you will loose your logs, there is no workaround.

Regards - Dirk

Hello Dirk,

Yes, I found the same message.

Reception on the loop is excellent at 518 kHz.
There are several broad noise bands between 270 kHz and 450 kHz, which are not present on my mini-whip.
So for NDB chasing the loop is a no go.

Last night reception has been good and New Orleans did make it once more.
At the moment the direction of the loop is 360 / 180 degrees and around 22:00 UTC the direction is changed to 300 / 120 degrees. It is interesting to note that for both beam headings Vardo was logged!

Did it! :-)

I had edit the databasefile yand_db.abs with DBManager deleting the
inactive italian stations and it was simple (it is not a "bulldozer: he
told me "OK?").
Now my station list is ok.

Many thanks Dirk for your help! ;-)

Have a good listeting.

Hi All,

Last night's Over 2K had most of the " regulars " but also had

a new one, never received before.

BAKU, although it has the same AZR as Sao Miguel, it is not

in the Azores but in Azerbaijan, on the west coast of the

Caspian Sea.

The message from Arkhangelsk was just one of a " string "

of 12.

6378. Navtex Logs from Warrington,ENG

Yahoo group: navtexdx (2013)
Date: 2013-10-25 13:20:47 UTC
From: Brian Martlew
Topic: 5067 Message: 6378

After an extended break from radio over the Summer I decided to connect all the gear back up yesterday evening to see if everything was ok. Apart from having to make up a new patch cable to go between the incoming coax from the antenna and the ALA100 control box it all went well enough.

After switching on it was sad to see the level of hash from low-voltage lighting systems and cable TV installations has got significantly worse over the last 6 months. At least there don't seem to be any permanent carriers too close to 490 or 518 so there's hope yet!

Checking the log this morning I was pleasantly surprised with the results. I even managed a new all-time entry into log with $19C Vardo producing some good clear decodes.

73,
Brian G1NXS

Hi all,

Another interesting night, there's no end to it!
04N Portsmouth was long time no see, jan 2011 was the last date logged according to RE.

Regards - Dirk

Caught a new one for the season last night. Those NE stations are a
tough path for me.

Mark Ku7z

6381. RE: Navtex Log from Antwerp, BEL 20131025

Yahoo group: navtexdx (2013)
Date: 2013-10-25 14:56:08 UTC
From: <la6lu@...>
Topic: 6379 Message: 6381

Hi Dirk

Very impressive :)

Can you tell a a bit about your setup? I.e. antenna? direction (with loop or just whip)? height above ground? etc.
What is the longest distance you have seen on that navtex setup?

Regards
Geir
LA6LU

Hi all,

Another interesting night, there's no end to it!
04N Portsmouth was long time no see, jan 2011 was the last date logged according to RE.

Regards - Dirk

Hello Dryden,

I found the same UNID as you did.
The header was blocked by Grindavik, but this is Labrador for sure.

73,
Roelof

Hello Geir,

Reception yesterday was on the loop. This is a 1mtr wideband loop + balanced preamp, built by Roelof Bakker (recovered from an ALA with a deceased preamp). Preamp design was by Chavdar LZ1AQ, slightly modified by Roelof.
See:
<http://www.lz1aq.signacor.com/docs/wsml/wideband-active-sm-loop-antenna.htm>

The loop stands ~15mtr from the house, loop center is at ~2.5 mtr, pointing 290/110 which is roughly Miami/New Orleans from my QTH. I have done extensive tests in the past comparing the whip to the loop, and my conclusion was that the whip equals the performance of the loop, except in conditions where interfering stations could be nulled out with the loop. However, you should know that the nulls of a wideband loop disappear at night for distances less than ~600..800km because of skywave effects, compromising the suppression of local stations.

A wideband loop has very narrow and deep nulls (up to 30..35dB!) but only for ground wave signals and very low incidence angle DX.

Regards - Dirk

Hi Dirk

Thank you for all the useful info. During the summer months I have not been a very active DX'er but I plan to be more active, at least by the winters. The reason I was asking you is that when active, I do both some DX and have a system which continously (365/7/24) are uploading navtex messages to the net each 5'th minute. For navtex and ndb, I am using either a long wire, the PA0RDT active antenna or a dedicated active navtex antenna by Nasa Marine. But I am not satisfied by the coverage yet. I know these active antennas should be put up as high as possible to be effective. The mast I am using now is about 8 meters but I plan to extend it to 18 meters, hopefully I can do it now in November before the winter gets too hard here. It is not operable yet, but I am also about finshed putting all the coax under ground (inside a plastic tube) and earthing the coax under earth at around the middle point where I already have a 2 meter long vertical copper tube protruded right down in humid earth. This and the mast extension will hopefully extend my coverage in the future. So far I have been unable to catch the states when good condx, but that's my goal. What you say and since the mast is high and will be even higher, I think the PA0RDT antennna is good enough. I want it omni directional since I am sending data to navtex.net, but it won't hurt if I can catch longer distances too :)

Thanks...

Best Regards
Geir

Hi Geir,

I can't speak for the NASA marine antenna, but putting the PA0RDT higher up will not necessarily enhance reception of DX. Signal levels may go up, but the noise levels as well. What counts is the signal to noise ratio. I have checked the SNR here with the whip hanging from a rope and pulley system from ~10 meter to ground level, and found the optimum height to be 4 to 6 meter. My whip is now mounted on a 5 meter 50mm PVC tube, supported by 3 nylon guy wires at 2mtr. The coax is grounded at the base of the mast with 3 x 1.5 mtr copper rods, and is buried ~30cm.

Of course, the optimum height will be influenced by your local situation. It is important to put the whip above the local "noise bubble" caused by all kinds of domestic devices. In an urban area it can be beneficial to put the whip higher up.

Cheers - Dirk

Hello Dirk, YaDD beta 0.7 looking good!

Much more sensitive spectrum and good decoding...

Mode of decode I use CW and trying FSK which gives nice clear tone.
Know very little about FSK ...

Thank you for your on going YaDD work.... highly appreciated!

Hello Dirk,

Thanks for the reply, yes good to be back and 518 is good right now even with just long wire.. NaND working great!..
Hope to get ALA Loop to get into DXNavtex and also DSC and DGPS..
Lot of noise where I live and ALA should make it a lot quieter..) the long wire is a bit of a struggle...

Good news about NaDD! Yes take your point about Camel)))
Thanks Dirk!

Regards..
Steve

---In navtexdx@yahoogroups.com, <dirk.claessens@...> wrote:

Hi Steve,

Welcome back, conditions on 518 have been outstanding the last weeks.
I must say DSC is quite more complicated than Navtex; DSC is a number dance with many exceptions/variations/illogicalities. You probably know the saying: "A camel is a race horse designed by a committee", well, DSC is the camel, and the committee is the ITU-R-M493 :0)

If all goes well, the next beta will be out end of the week. It should correctly decode format 120 messages (with all variations) and "all ships" messages.

Regards - Dirk

Hi Dirk,

Yes, perhaps you're right but I'll try it out anyway just to test. I don't think I am having much noise from my neighbors since they are not very near me or the active antenna. I think most noise probably comes from my own house (in fact my wife's "beloved" TV :) and with the new height it will come well above the noise floor my house generates

Perhaps the really good grounding I just have made will do soem of the trick. Since I am located only 5 meters from the shore. That 2 meter long copper pole protrudes right down to where there always is wet with with ground water from the sea. But I have not yet used this new earth for the active antenna as I am not quite ready burying it's coax yet (currently working on it), but it the new grounding made a good improvement for my R-75 receiver compared to my old grounding.

Anyway, tanks a lot for your information. When I see you and Roelf's logs, I know it should be at least possible for me to enhance the range I have today. Even if I do not come close to your 7000+ km, my range should improve at least more than it is today.

Regards

Geir

---In navtexdx@yahoogroups.com, <navtexdx@yahoogroups.com> wrote:

Hi Geir,

I can't speak for the NASA marine antenna, but putting the PA0RDT higher up will not necessarily enhance reception of DX. Signal levels may go up, but the noise levels as well. What counts is the signal to noise ratio. I have checked the SNR here with the whip hanging from a rope and pulley system from ~10 meter to ground level, and found the optimum height to be 4 to 6 meter. My whip is now mounted on a 5 meter 50mm PVC tube, supported by 3 nylon guy wires at 2mtr. The coax is grounded at the base of the mast with 3 x 1.5 mtr copper rods, and is buried ~30cm.

Of course, the optimum height will be influenced by your local situation. It is important to put the whip above the local "noise bubble" caused by all kinds of domestic devices. In an urban area it can be beneficial to put the whip higher up.

Cheers - Dirk

I am using either a long wire, the PA0RDT active antenna or a dedicated active navtex antenna by Nasa Marine. But I am not satisfied by the coverage yet. I know these active antennas should be put up as high as possible to be effective.

Hi Roelf,

These logs from you is very good DX... outstanding!! Such logs as yours and Dirk's is whats inspires me and makes me wanting to improve my own coverage.

Unfortunately, I did not had time to do this antenna and grounding work during the summer. Now I have better time, but have only about one month max to do it all; heighten my mast to 18 meters (not done), burying my coax (almost done), new and better grounding (done).

As if this was not enough I also plan to build a 13 element 10.5 dbi collinear (glass fiber) vertical for my AIS reception (have collected all the parts I need only).

Regards

Geir

Yes indeed, Roelof & Geir,

DX-ing during a solar minimum is a wonderful experience.
It's like magic happening!

Cheers - Dirk

Hi,

My first report. Perhaps not that big DX. Cyprus at 3205 km was the greatest distance today.

Regards
Geir

From: <stevesden1@...>
Topic: 6351 Message: 6404

Hello Dirk

Me again(YaDD 0.8 nice update! real neat with auto tune....

Very neat option to be able to add RX frequency too.....6.312000 Mhz springs to mind and this frequency seems to be used but not logged by some users)

One thing Dirk in the unzip process, when unzipped, using Win 7. is that the Properties of file YaDD Application and file YADD_ MMSI_ COAST have to be ' unblocked' Its a WIN7 thing...after that all is fine))

Get this issue quite a lot with WIN 7 when programs are not officially installed......its not your program issue)

Thanks again Dirk!

Hello Dirk, YaDD beta 0.7 looking good!

Much more sensitive spectrum and good decoding...

Mode of decode I use CW and trying FSK which gives nice clear tone.
Know very little about FSK ...

Thank you for your on going YaDD work.... highly appreciated!

Regards

Hello Dirk,

Thanks for the reply, yes good to be back and 518 is good right now even with just long wire.. NaND working great!..
Hope to get ALA Loop to get into DXNavtex and also DSC and DGPS..
Lot of noise where I live and ALA should make it a lot quieter..) the long wire is a bit of a struggle...

Good news about NaDD! Yes take your point about Camel)))
Thanks Dirk!

Regards..
Steve

---In navtexdx@yahoogroups.com, <dirk.claessens@...> wrote:

Hi Steve,

Welcome back, conditions on 518 have been outstanding the last weeks.
I must say DSC is quite more complicated than Navtex; DSC is a number dance with many exceptions/variations/illogicalities. You probably know the saying: "A camel is a race horse designed by a committee", well, DSC is the camel, and the committee is the ITU-R-M493 :0)

If all goes well, the next beta will be out end of the week. It should correctly decode format 120 messages (with all variations) and "all ships" messages.

Regards - Dirk

Hello Dirk,

Been away from Navtex Dx for sometime, good to be back in the group and some great logs! Good to be back on YaND!

Using Winradio with antenna tuner and long wire which is not a great setup for DX so looking to get ALA Loop...

Beta YaDD working well too, thanks for taking on DSC, has quite a following as Navtex dx does have too)
Following development of YaDD with great interest)

Hi Steve,

-The frequency box is not really used yet; in the next release it will be possible to enter any frequency.
-You're the first to mention the "unblock" issue. What exactly do you have to do?
 (I cannot reproduce this on a Win7/64 system)

Cheers - Dirk

Hi Dirk,

Yes mentioned about WIN 7 in case you had someone saying the program was not working etc.....have seen this happen with Multipsk CHM help file...in the Multipsk Yaggo group....

For some reason this happens sometimes on Win 7 on certain files, right click on file to get file Properties one may see the word -file blocked and gives option with a tick box to unblock.....tick box and save.......all good)
Win 7 is very fussy about Supervisor file opening etc, give me XP any day!

You probably cannot produce the unblock issue as your files are all ok to run....and this issues sometimes comes up when a program is downloaded, unzipped.......to user designated folder location and run from there without going through an install process....and is from unknown source...

There may well be something in my Win 7-64 security side that is not quite right eg file Permissions etc..
Thanks Dirk, hope the above makes sense)
Cheers..
Steve

6409. Re: [navtexdx] Navtex Log from Antwerp, BEL 20131027

Yahoo group: navtexdx (2013)
Date: 2013-10-27 11:14:01 UTC
From: Roelof Bakker
Topic: 6407 Message: 6409

Hello Dirk,

Yes, conditions were excellent.

I am still comparing the loop versus the mini-whip here.
It is a lot of work, but quite interesting.
Last night I found quite a few Canadian NAVTEX station on the loop and not
on the mini-whip and vica versa.
This was found from New Orleans:

Loop:

From: Vernon
Topic: 6411 Message: 6411

TA conditions for Navtex were quite good last night...much better than
NA CLE conditions :-)Even potted 3 new ones on 490khz

Also surprised with the Astoria Washington USA showing on 518khz

Hello Dirk,
Very nice log! This band is full of surprises, we have strong gales forecast here, so last night I took down my passive loop and put it on the ground, but left YaND on anyway, as you do.This morning, there amongst regulars is my best DX to date - $04C VCK Sept-Iles,CAN. Maybe I'll leave it there.

Hi Roelof,

Not a shred of New Orleans here.
For both your loop and whip, Bjuroklubb is kicking in at 05:10, spoiling the party.
Another observation that the loop has no (or degraded) nulls at night for that distance.

Regards - Dirk

---In navtexdx@yahoogroups.com, <roelof@ndb.demon.nl> wrote:

Hello Dirk,

Yes, conditions were excellent.

I am still comparing the loop versus the mini-whip here.
It is a lot of work, but quite interesting.
Last night I found quite a few Canadian NAVTEX station on the loop and not
on the mini-whip and vica versa.
This was found from New Orleans:

Loop:

Hi Dryden,

Nice!

I have read many times in literature on the subject that small loops (small wrt wavelength) are not affected much by height, and may indeed perform better near the ground because the noise level (generally) tends to be lower there.

From: <dl4ybp@...>
Topic: 6408 Message: 6416

Thanks for your help Roelof. I was quite surprised about New Orleans. I haven't heard that station for long time. A real gooddie. And also surprising because the rest of my receptions last night was not so interesting, apart from Sept-Iles and San Juan at a very early hour for me.

Perseus plus the external soundcard of the Microham interface gives good results, as did my R&S EK70 with the this soundcard. Usually I use the Microham interface for PSK31 ham radio. Its soundcard seems to be good. It is a really observable improvement. And helps me to see the fragments of the DX. Perseus speaker output fed into its mike input wasn't bad either, clearly better than using VAC, but it was tricky to find the right settings for speaker output and mike input etc. in order to avoid too strong audio.

73 from very windy Northwest Germany

Hans, DL4YBP

The good conditions seem to be continuing although lots of out-of-slot
gale warnings from local stations made catching the dx a bit harder.

73,
Brian G1NXS

Hello all,

Propagation from the north seems to be excellent.
I receive excellent decodes from Bodo, Vardo and Archangelsk.

daily log:

Hello all,

There was quite a bit of static from the Mediterranean near Tunesia.
Fortunately activity tapered off over the course of the night.

Daily log:

Dirk,

Well done! That's one that is still eluding me.

In fact, looking back through my logs from last night I can see a short fragment but not enough to justify claiming it I'm afraid. Oh well, next time maybe.

73,
Brian G1NXS

Hello Dirk,

I guess you logged it on the loop and I did the same, though a little
worse:
(The distance is 69 km more!)

20131031 0000 518 $09A EQM Bushehr,IRN 4624
2013-10-31 00:00:39> ZCZC AW085BUSHEHR RADO/TQM
2013-10-31 00:00:42> V1200 UTC OCT 30.2013
2013-10-31 00:00:49> 7NAVA~AA IX(PERSIAN GULF AND APNOACHESGL
2013-10-31 00:01:35> KNAVIGATIONAL~~~ ~RF~~~I~OE~~{}

The direction of the loop is now 75 / 285 degrees, which seems to be a
good compromise as the northern stations are also coming in nicely.

I have also never logged this one and the reason is probably co-channel
interference.
When La Garde is late, Novorossiysk is taken over the channel.
For some reason this did not happen last night!

The weird thing is that the Kyoto Dst dropped considerable since yesterday.

Dirk,
 I must admit, I am a bit jealous!
Question ist : why does this always happen when I am on an business trip?

73s

made it into my log. With the help of Dirk's and Roelof's great Busher reception I could identify the tiny fragment which I received. I had already overlooked it in my log. See for yourself. A big surprise.

Hi Dirk,

Congratulation with the nice logging :) First time loggings is always fun :)

I got my first Egypt the other day (3 messages from Suz, the best one is below).

6450. Navtex decode

Yahoo group: navtexdx (2013)
Date: 2013-11-01 08:55:57 UTC
From: <stevesden1@...>
Topic: 6450 Message: 6450

Hi all...

Very impressed with logs on here!

Not been long into Navtex and with present setup on long wire them range is limited to Nav area 1.

Use Winradio which does offer CW USB and FSK amongst others and was wondering if indeed there is any preference of these in Navtex decoding ?

I keep promising myself an ALA Loop as living in town there is a lot of noise...
Have to say YaND is the best standalone Navtex decoding program around!

6452. Navtex Logs from Warrington,ENG

Yahoo group: navtexdx (2013)
Date: 2013-11-01 09:25:02 UTC
From: Brian Martlew
Topic: 5067 Message: 6452

Bushehr continues to taunt me. Last night's fragment is almost
certainly Bushehr but still not quiet enough to justify a positive ID.
That extra 400 or 500 km seems to make all the difference.

6454. Lübbecke: Bushehr again here last night.

Yahoo group: navtexdx (2013)
Date: 2013-11-01 10:41:33 UTC
From: <dl4ybp@...>
Topic: 6454 Message: 6454

Really astounding conditions, even more surprising as we are somewhere close the climax of the present sunspot cycle.

Hi Dirk,

YaDD beta 8 running well, using it a lot and very impressed!
This program has huge potential....and very grateful for your time with input and development.

Hi Dirk,

Yes mentioned about WIN 7 in case you had someone saying the program was not working etc.....have seen this happen with Multipsk CHM help file...in the Multipsk Yaggo group....

For some reason this happens sometimes on Win 7 on certain files, right click on file to get file Properties one may see the word -file blocked and gives option with a tick box to unblock.....tick box and save.....all good)
Win 7 is very fussy about Supervisor file opening etc, give me XP any day!

You probably cannot produce the unblock issue as your files are all ok to run....and this issues sometimes comes up when a program is downloaded, unzipped.....to user designated folder location and run from there without going through an install process....and is from unknown source...

There may well be something in my Win 7-64 security side that is not quite right eg file Permissions etc..
Thanks Dirk, hope the above makes sense)
Cheers..
Steve

Hi Steve,

-The frequency box is not really used yet; in the next release it will be possible to enter any frequency.
-You're the first to mention the "unblock" issue. What exactly do you have to do?
(I cannot reproduce this on a Win7/64 system)

Cheers - Dirk

Subject: [navtexdx] RE: Dirk YaND - YaDD

Hello Dirk

Me again(YaDD 0.8 nice update! real neat with auto tune....

Very neat option to be able to add RX frequency too.....6.312000 Mhz springs to mind and this frequency seems to be used but not logged by some users)

One thing Dirk in the unzip process, when unzipped, using Win 7. is that the Properties of file YaDD Application and file YADD_ MMSI_ COAST have to be ' unblocked' Its a WIN7 thing...after that all is fine))

Get this issue quite a lot with WIN 7 when programs are not officially installed......its not your program issue)

Hello all,

Truly amazing conditions from all directions and guess what, the Kyoto Dst was -35!
From the LF reflector, I learned that with solar disruptions the tipping point for propagation is 130 kHz.
At the moment propagation at the US experimental 74 kHz band is severely suffering, whilst the 475 kHz band is not.
Apparently this is also true for NAVTEX 518 kHz!

Hi all,

I tried YaDDb08 and found it very good as well as being simple and
lightweight without overloading the CPU.
It would be nice to have, in addition to the total log, a log with the
list of the transmitting stations only, both coastal and marine, as with
YAND.

Hi Dirk,

I would like to try YaDD. I am using w7 64 bit. Where can I find it? I have been using YaND and it is fantastic. Thank you for that program.

Hi Dirk,

Yes mentioned about WIN 7 in case you had someone saying the program was not working etc.....have seen this happen with Multipsk CHM help file...in the Multipsk Yaggo group....

For some reason this happens sometimes on Win 7 on certain files, right click on file to get file Properties one may see the word -file blocked and gives option with a tick box to unblock.....tick box and save.......all good)

Win 7 is very fussy about Supervisor file opening etc, give me XP any day!

You probably cannot produce the unblock issue as your files are all ok to run....and this issues sometimes comes up when a program is downloaded, unzipped.......to user designated folder location and run from there without going through an install process....and is from unknown source...

There may well be something in my Win 7-64 security side that is not quite right eg file Permissions etc..

Thanks Dirk, hope the above makes sense)

Cheers..

Steve

Hello Dirk

Me again(YaDD 0.8 nice update! real neat with auto tune....

Very neat option to be able to add RX frequency too.....6.312000 Mhz springs to mind and this frequency seems to be used but not logged by some users)

One thing Dirk in the unzip process, when unzipped, using Win 7. is that the Properties of file YaDD Application and file YADD_ MMSI_ COAST have to be ' unblocked' Its a WIN7 thing...after that all is fine))

Get this issue quite a lot with WIN 7 when programs are not officially installed......its not your program issue)

Hello Dirk,
Yes strength of signals here was stronger than usual from North and South giving nice clean decodes. Great when you're running a very basic set-up i.e a few turns of wire and a portable RX!

Hello all,

Truly amazing conditions from all directions and guess what, the Kyoto Dst
was -35!
From the LF reflector, I learned that with solar disruptions the tipping
point for propagation is 130 kHz.
At the moment propagation at the US experimental 74 kHz band is severely
suffering, whilst the 475 kHz band is not.
Apparently this is also true for NAVTEX 518 kHz!

Hi Bill,

See:

<http://groups.yahoo.com/neo/groups/navtexdx/files/Members%20Files/DIRKCL>

Unzip in a directory of choice, but NOT under ../Program Files to avoid access right problems on W7/W8

Regards - Dirk

Hello Bill,

Just to add to Dirks comments about Win 7-8, if you have any issue running program, right click on both files. YaDD and YADD MSI COAST to configure file properties

Sometimes Win 7 has an 'unblock' tick box with message file came from another computer... Unblock both files and there you go)
It is a win 7 security issue...not YaDD..

6466. Lübbecke 01/02 Nov.: a lot of activity l ast night with many long distance signals

Yahoo group: navtexdx (2013)
Date: 2013-11-02 10:20:38 UTC
From: <dl4ybp@...>
Topic: 6466 Message: 6466

that influenced the reception quality of the usually strong European station. Many fragments of stations not received so often here. Nice from a DX point of view.

Novorossiysk, Bahrein, Sydney Canada, San Juan, Iqualuit possibly, Ismailia, Miami, Sao Miguel, Labrador possibly, New Orleans possibly.

Hello Vern,

Thank you for clearing this one up.
It has been received here very often and so far no clue where it came for!

73,
Roelof, pa0rdt

Hello Hans,

This is Sydney, not Iqaluit.
All your other loggings are OK

Regards - Dirk

6471. Navtex Log from Antwerp, BEL 20131102

Yahoo group: navtexdx (2013)
Date: 2013-11-02 13:25:47 UTC
From: Dirk Claessens
Topic: 6471 Message: 6471

```
Nothing from the middle east here, but lots of  T/A.
It's almost becoming boring. :0)

Cheers - Dirk

Hi Dirk,
what it is changed in YaDD b09 version?
I didn't see nothing more about b08.

Thanks.

Roby

Hello Hans,

Hard to tell, nothing is scheduled at that time.
Language is French, so it must be an off-schedule transmission of Sydney or Sept-Iles.

Regards - Dirk

Topic: 6472 Message: 6481

I had similar ideas and wasn't sure and hoped someone in the group had a better decoding.
Thanks Dirk.

Hello Hans,

Hard to tell, nothing is scheduled at that time.
Language is French, so it must be an off-schedule transmission of Sydney or Sept-Iles.

Regards - Dirk

What Canadian station may this have been at 06.07 UTC?

Hi Dirk,

using YaDD on a notebook with a small screen and Windows 7 Starter, the
console above overlaps the waterfall.
Is there a way to reduce the overall size of the window and have a
regular display?

73, Roby

6487. Unknown ID

Yahoo group: navtexdx (2013)
Date: 2013-11-03 17:31:17 UTC
From: Vernon
Topic: 6487 Message: 6487

Anyone have the ID of this coast station

<Selective call to a particular individual station>
Called MMSI station address: 353233000 [Ship] (TATEYAMA, HOCD - Panama)
Category: Safety
MMSI self-identifier: 000469990 [Coast station: St. Unknown]
Telecommand 1: Test
Telecommand 2: No information
Neither RX/TX frequencies nor position supplied
Check Sum: error
Date and time of decoding: 11/03/2013 15:56:00

6488. Re: [navtexdx] Unknown ID

Hello Vernon,

My thought is that it is a corrupt decode - the give away is "Check Sum: Error" which shows that at least one of the symbols has been received incorrectly.

One possible source: Point Reyes has the MMSI : 003669990 and it would only take the second symbol in the MMSI to be corrupt to give you 000469990

The MMSI for Point Reyes when coded into a DSC message would be sent as:

000 036 069 099 000

Your corrupt MMSI would have been received as:

000 004 069 099 0000

the second symbol changed from 036 to 004 when decoded.

That's only one possible explanation, but the main thing is that you can't trust MultiPSK when it says "Check Sum: Error"

Cheers,

John

I also see that the Ship MMSI 353233000 is listed on the ITU database and on Marine Traffic as the "Pacific Calm", and is currently in port at Prince Rupert in British Columbia, so Point Reyes may be a valid Coast Station that it might be using for a test call.

MultiPSK seems to think it's the Tateyama, which appears to be a Japanese vessel with the MMSI 431900217. Confusing?

BTW, what band was this on? I guess it wasn't 2187.5kHz?

Cheers again,

John

Hi John and thanks....have been monitoring 12577.0 today.....just before that I had 3 decodes with check sum error..would have been a new one LOL!!!! Having said that Point Reyes hasn't shown on any other TX yet today on this band.

Cheers and thanks

Vernon

<Selective call to a particular individual station>
Called MMSI station address: 352236000 [Ship] (ASIAN JOY, 3FPH6 - Panama)
Category: Not d?fined
MMSI self-identifier: 005741040 [Coast station: Hai Phong MRCC Hai Phong] (Viet Nam)
Telecommand 1: J3E telephony
Telecommand 2: No information
No control by check sum.

Feel free to delete, unread...

Just to add some more info, and a glimpse into the formation of DSC messages....

If the error was, in fact, a corruption of the 2nd symbol of the MMSI of Point Reyes then here's what may have happened:

In creating the DSC transmission character in question "036" would have been turned to a binary number:

36 = 0100100

a parity check is added, which is a 3-bit number representing the number of 0s in the basic data.... in this case there are 5 x 0s so the parity check is 101

the word (data+parity check) would be transmitted as follows:

0010010101

the first 5 bits are the binary for 36, sent LSB first (ie backwarsd to our eyes), and the last 3 bits are the parity check (101)

Now, looking at Vernon's decoded message we have, in place of 036, a value of 004.

4 in binary is :

0000100

the parity check would be 6 (110) because there are 6 0s in the data.

The symbol is send, LSB first + parity check

0010000110

This is what MiltiPSK THINKS it's received.

Now, compare the two raw symbols:

036 (correct) : 0010010101
004 (errored) : 0010000110

There are only two bits different - so if two bits in the original data are switched in the decoder (due to noise etc.) it is still possible for the parity check to work - the decoded 0010000110 will appear as a vaild "4" because the parity check bits are still 110 = 6 and the data bits 0000100 have 6 0s, and the value is "4" (remember to reverse the order of the data bits - they're sent LSB first, we write binary numbers down with the MSB to the left)

Once the message has been received and all symbols are available MultiPSK calculates an error check sum, and compares it to the Error Check Character it receives within the message (which is computed by the sending DSC controller).

This is where Vernon's message failed - the checksums didn't match.

Looking at the message I would guess the message symbols would have been, before calculating the Error Check Character:

120 035 032 033 000 000 108 000 036 069 099 000 118 126 126 126 126 126 126 126 122

the "120" means Format = "Selective Call", the "108" means Category = "Safety", the "118" means Telecommand = "TEST" and the "122" means End of Sequence = "Acknowledgement". The rest of the message is the MMSIs of the called and calling stations, and the 126s are "padding" where there is no information required.

The ECC is calculated by sequentially XORing each message symbol in turn. Some calculators will have this function, otherwise you need to convert all the symbols to binary and start counting 1s..... not fun!

The ECC would be 070

The full message as transmitted would be :

120 120 035 032 033 000 000 108 000 036 069 099 000 118 126 126 126 126 126 126 126 122 070 122 122

The 120 is sent twice, and the 122 End of Sequence is sent three times, bracketing the ECC character.

The decoded message would have the symbol "036" replaced by the erroneous "004"

120 120 035 032 033 000 000 108 000 004 069 099 000 118 126 126 126 126 126 126 126 122 070 122 122

The ECC is calculated by MultiPSK by using the received symbols:

120 035 032 033 000 000 108 000 004 069 099 000 118 126 126 126 126 126 126 126 122

In this case MultiPSK comes up with : ECC = 102

Comparing the Received ECC of "70" and the calculated ECC of "102"
MultiPSK then declares "Check Sum: Error".

There's a little more complication - every symbol is sent twice, spaced out in time, so there's extra chance of getting a good copy - in this instance I guess only one of repeated symbols orignially sent as 036 was received with a valid parity check - and that valid symbol was receive as "004" due to having two "bit flips" in the decoder due to noise etc.

The final checksum test still spotted the error.

For MultiPSK:

If you see "No Control by Check Sum" I think this implies that despite the best efforts of sending each symbol twice, one or more symbols couldn't be received (even with two copies of each to play with) without a symbol parity error, and in that case there's no point calculating the final Error Checksum - as there aren't a full set of valid symbols to work with. MultiPSK then tells you this with "No Control By Check Sum".

Now, some of the errored/missing symbols might simply be in the part of the message carrying no information (the "126" padding bits) and you can possibly assume the rest of the message is correct - although it is dangerous to assume so, and I'd only trust a message that had "Check Sum: OK"

Vernon's message was a rare one, where all symbols were received, seemingly correctly, but the overall message was still corrupt.

Cheers,

John

Thanks Dirk.
The only way to operate with a small display it is to enlarge the
waterfall manually instead the messages panel.

6494. Re: [navtexdx] Unknown ID

Yahoo group: navtexdx (2013)
Date: 2013-11-03 21:18:48 UTC
From: Dirk Claessens
Topic: 6487 Message: 6494

Hi John & all,

John: perfect explanation! (you're the perfect man to write Yadd's user manual :0)

The time diversity system John mentioned is exactly the same for Navtex & DSC, so the following is perhaps interesting to both Yand/Yadd users, just to show the power of time diversity in reconstructing data in error.

Below a complete raw "as received" DSC message is shown. Above each symbol a character d or r is shown to indicate the DX(first) an RX(repeat) position of the symbol. Symbols with a failing CRC check are indicated as ~~~ (Navtex does not do a CRC check, but uses a "sparse alphabet" instead). The repeat interval is 5 symbols, so for instance the 034 symbol below is repeated 5 symbols later.
The 000 however, is only correct in its RX position.

(this will only show up correctly if your mail program uses format info)

```
 d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r
d   r   d   r   d
125 107 125 106 120 105 120 104 037 120 005 120 005 037 ~~~ ~~~ ~~~ ~~~ ~~~ 000 037 000 ~~~
108 ~~~ 037 000

 r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d   r   d
r   d   r

005 000 005 118 000 ~~~ ~~~ ~~~ 118 126 126 126 126 126 126 126 126 126 126 122 126 102 126
122 122
```

Although 10 errors are present, after untangling and choosing the correct version of each symbol, the final messages becomes 100% correct, including the final ECC check:

```
120 120 037 005 005 000 000 108 037 005 005 000 000 118 126 126 126 126 126 126 126 122 102
122

19:30:36> 2187.5: 120 120 037 005 005 000 000 108 037 005 005 000 000 118 126 126 126 126
126 126 126 122 102 122
19:30:36>           FORMAT: SELECTIVE CALL
19:30:36>              CAT: SAFETY
19:30:36>               TO: SHIP  370505000
19:30:36>             FROM: SHIP  370505000
19:30:36>              TC1: TEST
19:30:36>              TC2: NO INFO
19:30:36>             FREQ: --
19:30:36>              POS: --
19:30:36>              EOS: ACK
19:30:36>             cECC: 102 OK
19:30:36>
```

In short: The DSC/Navtex diversity system can correct bursts of 5 successively characters/symbols in error.

Cheers - Dirk

Subject: RE: [navtexdx] RE: Dirk YaND - YaDD

I had a similar problem on my notebook - could not see menu blocks under ticker tape readout at top of screen under meters. In computer display settings the font setting was set at 150%. Reset it to default of 125% and everything looks normal.

Subject: Re: [navtexdx] RE: Dirk YaND - YaDD

Hi Dirk,

using YaDD on a notebook with a small screen and Windows 7 Starter, the console above overlaps the waterfall.
Is there a way to reduce the overall size of the window and have a regular display?

73, Roby

6501. Muscat, OMA

Yahoo group: navtexdx (2013)
Date: 2013-11-04 12:41:13 UTC
From: Maurizio Marini
Topic: 6501 Message: 6501

Hi,

I have found a garbled message from Muscat, OMA (I think).

This in another station very rare from my location.

Not often that I put just the one log in..

20131105 0422 518 $04A NMA Miami,USA 7457

First time in a couple of years from my home QTH. Used to be a regular.

73
Dave

6516. NAVTEX 518 5th/6th Nov -First US in Log

Yahoo group: navtexdx (2013)
Date: 2013-11-06 09:49:28 UTC
From: <denno9@...>
Topic: 6516 Message: 6516

Good morning all,
A very good night here with my first US decodes. NMG New Orleans very fragmented but ID OK I think (it helps to be able to check location of vessels on Marine Traffic dot com etc!).

Many fragments of DX. See for yourself.

Novorissiysk with tiny fragments
Labrador out of schedule and very early here
Astrakhan with a short message, then QRMed by REYKJAVIK VIA GRINDAVIK,
…… But 10 mins later again
Busher with a tiny fragment and very much hidden between other messages
San Juan, first a very faint idea of this station, a few minutes later better

Cyprus Radio not listed here, with many long messages and heavy QRM

6519. Re: [navtexdx] Strange noise interference

Yahoo group: navtexdx (2013)
Date: 2013-11-06 17:02:01 UTC
From: bob.blodge@...
Topic: 6512 Message: 6519

Hi All,

Does anyone know what sort of thing could create this signal ?

The larger of the alternative peaks occur at 100 hertz intervals

with the smaller peaks at the half way 50 hertz points. They

are usually much larger than this but seem to have no effect

on YaND reception ! Last night I had 9 good transatlantics

including New Orleans, Miami, and Portsmouth, and of course

San Juan !

This odd signal started a couple of weeks ago and sometimes

seems to be modulated by morse CHA, but this couild be a

separate signal.

Any ideas ?

Regards

Bob IOW

Hello all,

Conditions are still excellent.

I found this UNID; however I can't make head or tail of it.
Any help is much appreciated:

Hello Roelof,

Davis and Brevoort are in the VFF Iqaluit area.
But, IIRC Iqaluit is closed down in winter, and Labrador is handling messages for the Iqaluit area in an extra timeslot. (I *think* from november to april)

Given the perfect decoding quality, I guess you received Labrador.
Maybe someone on the other side of the pond can confirm?

Regards- Dirk

6525. Unable to receive NAVTEX,, Whst the distance ?

Yahoo group: navtexdx (2013)
Date: 2013-11-07 09:33:16 UTC
From: <dgwooldridge@...>
Topic: 6525 Message: 6525

Try as much as I do I am unable to pick up any NAVTEX signal. I have a variety of able receivers (Winradio Excalibur, ICOM R8500, ICOM IC-7400, JRC 535 and a FC Pro+) the antennas I have up are a long wire, a Par0dt mini whip and a wellbrook Imperium

Tuning into 518 just produces "noise" but no signals

Any ideas? Maybe I am to far "in land" ? I am approx. 40 miles)50Km) inland from Southampton in Southern England

6526. Re: [navtexdx] NAVTEX from Zealand, HOL

Topic: 6527 Message: 6527

Good morning all,
This is the 2000Km + log last night. Very fragmented NMA Miami is a welcome first for me.

Date: 2013-11-07 10:17:36 UTC
From: Roelof Bakker
Topic: 6451 Message: 6528

Hello all,

Excellent decodes from Archangelsk and Vardo and early reception of VOK.
However after midnight Canadian propagation collapsed.
Propagation from the US and Puorto Rico did not suffer though.

Daily log:

Tuning into 518 just produces "noise" but no signals

....

Hi,

A navtex channel is not permanently busy. Each station is assigned a 10 minute time slot every 4 hours.
So, especially in daytime, it may take a while before you catch something.

Regards - Dirk

Hi,

You must be doing something very wrong ! You are almost within shouting distance

Niton, Cullercoats and Portpatrick.

Presumably use are using SSB (and have remembered to switch the receiver On !!)

Can't think of any other reason !

Keep Trying.

Regards

Bob

Hi Roberto,

I live only 10 KM from Niton and I have never seen anything like this. It must have been some sort of " special " and what Avunav had to do with it, I can't imagine !

Regards,

Bob, Isle of Wight

Hi Roberto,
I don't know the meaning of the message, but I see a very similar msg (below) has been sent at least once previously- in 2011and was also a puzzle then. (I hope Roelof, the originator does not mind me re-posting his text!:

Hello all,

Conditions seem to be more or less back to normal.

I found a cryptic message, probably from VON St.Johns, CAN, or is it
Portpatrick?.
Does anybody know what this means?

6535. Re: [navtexdx] RE: Info request about Niton message

Yahoo group: navtexdx (2013)
Date: 2013-11-07 12:39:05 UTC
From: Roberto Rizzardi
Topic: 6524 Message: 6535

I received this message two times this night (at 00:45 and 04:42 hours utc) and I don't remember I have seen this in the past.
YaND did decode as UNID but the messages were in the Niton slot in the middle of the other message received from Niton.

Thanks for your help.

6536. Re: [navtexdx] Info request about Niton message

Yahoo group: navtexdx (2013)
Date: 2013-11-07 13:09:38 UTC
From: Dirk Claessens
Topic: 6524 Message: 6536

Hello Roberto,

This kind of message was logged before. MODUK = Ministry Of Defence United Kingdom
Why it is being broadcast on Navtex is unclear though.

Cheers - Dirk

6537. Bodo is missing ?

Yahoo group: navtexdx (2013)
Date: 2013-11-07 18:41:14 UTC
From: <stephen_qrp@...>
Topic: 6537 Message: 6537

Hello

As Bodo has been missing from my log for a while, I thought I would make an effort to try and locate it's transmission in various over night recordings that I have.

However I cannot devote the time to slowly trawl though the recordings minute by minute, so naturally thought of jumping more or less to it's allocated time slot.

I looked at the YaND schedule but no mention of Bodo, but it is showing under database/station list as 518 19B LGP Bodo, NOR. Does Bodo actually have an allocated time slot ?

Regards to all

Stephen

6538. RE: Unable to receive NAVTEX,, Whst the distance ?

Topic: 6525 Message: 6538

Hi

You are not that far from me (Battle, East Sussex) and I get good reception with both the Par0dt / Wellbrook.

I assume you are using YaND, if so look up Niton in the NAVTEX Schedule eg 08.40 GMT or perhaps 09.40
and tune one of your radios to 518 CW mode filter bandwidth 400Hz . Next choose the correct audio input
from the drop down list (YaND top right) now watch the Spectrum screen for a "clean" signal. Make sure you are not over driving YaND with to much audio input as this will give gibberish. (noise ?)

Getting audio from the receiver to YaND may require VAC (virtual audio cable) depending on your setup, certainly with Winradio it may be the way to go.

Other tweaks such as calibrating the audio can be done later, just getting the basic setup is what you are after right now.

Good luck

Stephn

---In navtexdx@yahoogroups.com, <dgwooldridge@...> wrote:

Try as much as I do I am unable to pick up any NAVTEX signal. I have a variety of able receivers (Winradio Excalibur, ICOM R8500, ICOM IC-7400, JRC 535 and a FC Pro+) the antennas I have up are a long wire, a Par0dt mini whip and a wellbrook Imperium

Tuning into 518 just produces "noise" but no signals

Any ideas? Maybe I am to far "in land" ? I am approx. 40 miles)50Km) inland from Southampton in Southern England

From: Roelof Bakker
Topic: 6537 Message: 6539

Hello Stephen,

If you are using YaND, it contains a NAVTEX schedule tab.
Look Bodo up for NAVEREA 19 and you will see that the time slot is 00:10 UTC, 04:10 UTC etc.

So, it is due in ten minutes.

73,
Roelof

Hello Stephen,

Yes, it was the same story here.
There has been a solar disruption and hence northern propagation is heavily affected I'm afraid.
I did not see a trace of Vardo either.

Maybe it will be better in the 00:10 UTC time slot.

73,
Roelof

Hi list,

yesterday I found an almost perfect log of Vladivostok, RSE on 12579 kHz in
SeaTTY's logfile.
Can't remember, that I've logged it that faultless before.

Date UTC QRG ID Station ITU

20131107 1100 12579 $13B Vladivostok RSE

Hi Stephen,

Bodo is not on the air for very long, I had this message on Nov 5 and 6,

20131105 1610 518 $19B LGP Bodo,NOR 2029

2013-11-05 16:10:51> ZCZC BZ98

2013-11-05 16:10:54> 041610 UTC NOV 13

2013-11-05 16:11:03> NO MESSAGES ON HAND FROM BODOE RADIO / LGP / 002570700.

2013-11-05 16:11:04> NNNN

You could easily have missed them !

Regards

Bob

On 7 Nov 2013 at 10:41, stephen_qrp@... wrote:

Hello

As Bodo has been missing from my log for a while, I thought I would make an effort

to try and locate it's transmission in various over night recordings that I have.

However I cannot devote the time to slowly trawl though the recordings minute by minute, so naturally thought of jumping more or less to it's allocated time slot.

I looked at the YaND schedule but no mention of Bodo, but it is showing under database/station list as 518 19B LGP Bodo, NOR. Does Bodo actually have an allocated time slot ?

Regards to all

Stephen

6553. NAVTEX log from South East Norway

Yahoo group: navtexdx (2013)
Date: 2013-11-09 02:16:42 UTC
From: <la6lu@...>
Topic: 6543 Message: 6553

```
Report from : Geir Laastad / LA6LU
QTH : South East Norway
Locators : 59.41.21N 10.20.39E [JO59EQ]
Receiver : Icom IC-R75
Antenna1 : PA0RDT Mini-Whip
Antenna2 : 20m Long Wire
Antenna3 : Nasa Marine Active navtex whip
Navtex-Decoder : YaND 6.3

Each station once and +1000km only.

Yahoo group: navtexdx (2013)
Date: 2013-11-09 10:16:10 UTC
From: <dl4ybp@...>
Topic: 6556 Message: 6556

Cyprus, Haifa and the Egyptian stations plus a glimpse of Algiers were typical of last night. No sign of T/A at all. In the coming days I will turn the ALA from WNW-ESE to North-South and see hat happens.

Have a nice weekend
Hans, DL4YBP

6557. NAVTEX 518 Khz log from Corby UK 8th/9th Nov

Yahoo group: navtexdx (2013)
Date: 2013-11-09 11:28:08 UTC
From: <denno9@...>
Topic: 6557 Message: 6557

Good morning all, Apart from near perfect decode from VCO Sydney,CAN, mostly short propagation here, so log is 1000Km +. Oddly, first time I have logged SAH Bjuroklubb I think- is it not very active, low power, difficult path?

6558. Re: [navtexdx] NAVTEX log from South East Norway

Yahoo group: navtexdx (2013)
Date: 2013-11-09 13:50:42 UTC
From: Roberto Rizzardi
Topic: 6543 Message: 6558

Hi Geir,
I think you still have the Italian inactive stations in your YaND database and if you want to have a correct ID in your receptions you have to delete these stations from it:
Trieste, Cagliari, Augusta, Roma.
To do this you have to open the DB Manager in your YaND directory and delete the records of these stations, with attention because this operation is not reversible.

Your tip identified as IQA Augusta I think is 9AS Split HRV, as you wrote.

73, Roby

Hello all,

T/A propagation was almost completely absent.
For a long time nothing from NMR, Puorto Rico, could be found!

Daily log:

6566. Luebbecke 09/10 Nov.: ALA1530 to the North

Yahoo group: navtexdx (2013)
Date: 2013-11-10 10:34:01 UTC
From: <dl4ybp@...>
Topic: 6566 Message: 6566

And this is what happens if I poit the ALA to the North. Scandinavia and Italy dominates together with the UK stations and France. Astonishingly Astrakhan made it. I have listed every station when it appeared, then waited until the next station came and listed it and so forth. This has become a long log. What it does not show, however, is that I have many receptions of Niton, Pinneberg etc. one after the other. So e.g. 6x Niton in a row.

It's becoming winter, many groups of cranes have started from their resting places about 30-40 km North of here and are heading south, many of them just over our house and to the left and right.

73
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
Receiver : Rohde & Schwarz EK071
Antenna : ALA 1530 SSB+ to the North and South
Soundcard : Microham USB Interface III
Software : YaND 6.3

6567. RE: Bodo is missing ?

Yahoo group: navtexdx (2013)
Date: 2013-11-10 15:59:16 UTC
From: <la6lu@...>
Topic: 6537 Message: 6567

Hi Stephen,

Bodø is on here at my QTH in south east Norway each and every night :)
Of course the distance is not so far from me, so it's kind of semi-local here.

Regards
Geir
LA6LU

---In navtexdx@yahoogroups.com, <stephen_qrp@...> wrote:

Hello

As Bodo has been missing from my log for a while, I thought I would make an effort
to try and locate it's transmission in various over night recordings that I have.

However I cannot devote the time to slowly trawl though the recordings minute by minute, so
naturally thought of jumping more or less to it's allocated time slot.

I looked at the YaND schedule but no mention of Bodo, but it is showing under
database/station list as 518 19B LGP Bodo, NOR. Does Bodo actually have an allocated time
slot ?

Regards to all

Stephen

6568. RE: Re: [navtexdx] NAVTEX log from South East Norway

Hi Roby,

Thanks for the tip. I will look closer into this later this evening :)

Regards
Geir
LA6LU

---In navtexdx@yahoogroups.com, <robertorizzardi@...> wrote:

Hi Geir,
I think you still have the Italian inactive stations in your YaND database and if you want to have a correct ID in your receptions you have to delete these stations from it: Trieste, Cagliari, Augusta, Roma.
To do this you have to open the DB Manager in your YaND directory and delete the records of these stations, with attention because this operation is not reversible.

Your tip identified as IQA Augusta I think is 9AS Split HRV, as you wrote.

73, Roby

Hi Teijo,

Congratulations with a very nice logging indeed.

Your antenna, is is a true 900m longwire with it's broadside 78 degrees, or is it a beverage with it's tip at 78 degrees?

Regards
Geir
LA6LU

6570. Navtex Log from Antwerp,BEL 20131110

Yahoo group: navtexdx (2013)
Date: 2013-11-10 16:17:50 UTC
From: <dirk.claessens@...>
Topic: 6570 Message: 6570

Hi all,

As Roelof said, T/A was scarce last night, no doubt due to the solar flare. Only a very garbled fragment of Portsmouth could be logged just before sunrise.

Regards - Dirk

Report from : Dirk Claessens

```
Report from : Geir Laastad / LA6LU
QTH : South East Norway
Locators : 59.41.21N 10.20.39E [JO59EQ]
Receiver : Icom IC-R75
Antenna1 : PA0RDT Mini-Whip
Antenna2 : 20m Long Wire
Antenna3 : Nasa Marine Active navtex whip
Navtex-Decoder : YaND 6.3

Each station once and +1000km only.

Hi, Geir

Antenna is 900 meters beverage directed to the 78 degrees.
And now I got the Malaysia with it.

Tärkeys: Suuri

Hi Teijo,

Congratulations with a very nice logging indeed.

Your antenna, is is a true 900m longwire with it's broadside 78 degrees, or is it a beverage with it's tip at 78 degrees?

Regards

Geir

Thanks Teijo,

Yes the beverages are very good in the direction their tip is grounded through the end resistor. I have some experiences with such beverages from some years back, but I don't have one now. Anyway, it's nice to know what you used for this.

And congrats with Malaysia too :) next...perhaps Thailand ;)

Best Regards
Geir

From: Brian Martlew
Topic: 5067 Message: 6576

Poor conditions last night with many garbled or fragmented messages.
T/A reception was limited to Canada and northern US with no sign of
Miami or San Juan.

73,
Brian G1NXS

Hello Brian,

It is the same story here, with the exception that northern propagation
seems to be still there.

6579. Luebbecke 10/11 Nov. ALA to the West --- East

Yahoo group: navtexdx (2013)
Date: 2013-11-11 10:20:18 UTC
From: <dl4ybp@...>
Topic: 6579 Message: 6579

this time. The big European stations are still dominating. In comparison with the ALA pointing to the North --- South Stations such as Varna, the Greek and Turkish stations and Cyprus appear. Conditions were not good for DX, however, as Haifa, Quseir and Ismailia and of course T/A are missing.

73
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
Receiver : Rohde & Schwarz EK071
Antenna : ALA 1530 SSB+
Soundcard : Microham USB Interface III
Software : YaND 6.3

Hi Roelof,

It's good to know that it's not just me!

Regarding northerly propagation, my loop is fixed in a NW/SE orientation so I don't get particularly good results to the NE - in fact I can't remember the last time I heard Bjuroklubb for example.

73,
Brian G1NXS

6582. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-11-12 09:02:51 UTC
From: Roelof Bakker
Topic: 5067 Message: 6582

Hello all,

Propagation is slowly recovering.
NMR, Puorto Rico is back and was found in three timeslots.

At the moment reception of Vardo is more consistent than from Bodo, though
Vardo is 700 km more distant.

From: <dl4ybp@...>
Topic: 6583 Message: 6583

The Mediterranean stations came in quite nicely with the exeption of Egypt.
Grindavik, Istanbul and Haifa very early. Haifa and Cyprus with longer messages
and very clear. Muscat always a goodie for me.
St. Johns for the first time at 06.34 UTC. Before much earlier.

6585. Navtex log from Antwerp, BEL 20131112

Yahoo group: navtexdx (2013)
Date: 2013-11-12 13:22:57 UTC
From: <dirk.claessens@...>
Topic: 6585 Message: 6585

Hi all,

Only Canadian T/A could be logged last night, and a gragment of Bahrain. Not even a shred of Puerto Rico and Miami. Kp is slowly recovering from the flare .

Regards - Dirk

Report from : Dirk Claessens
QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver : Perseus SDR, Lowe HF225
Antenna1 : paOrdt Mini-Whip @ 5m
Antenna2 : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3
